

<i>Session Title</i>	Digital Technology and Spatiotemporal Intelligence for Enhancing Urban Resilience and Promoting High-Quality Development
<i>Session Description</i>	<p>This session brings together scholars to share research on spatiotemporal intelligence applications for urban resilience and high-quality development amid climate change. Influential experts and academicians in the field will be invited to share their cutting-edge research and practices, present case studies, and engage in discussions with participants. The goal is to advance theoretical understanding and inspire future research on building resilient, sustainable cities in the face of climate uncertainty.</p>
