

<i>Session Title</i>	Digital Intelligence Driving Sustainable Development — Youth Action
<i>Session Description</i>	<p>This session brings together emerging scholars and practitioners to explore the transformative potential of digital technologies in achieving sustainable development goals. Through keynote presentations, thematic sessions, and interactive workshops, participants will examine how cutting-edge innovations in artificial intelligence, big data analytics, and geospatial science can address critical sustainability challenges across environmental protection, climate resilience, and social equity.</p> <p>The session serves as a unique platform for young researchers to share groundbreaking studies, discuss policy implications, and develop collaborative solutions. Special emphasis is placed on fostering interdisciplinary dialogue between technology developers, sustainability scientists, and policymakers. Participants will gain insights into successful case studies where digital tools have effectively advanced SDG implementation while identifying new research frontiers.</p> <p>Designed as a global networking hub, the event facilitates meaningful connections between established experts and rising stars in the field. It features dedicated mentorship sessions, career development workshops, and innovation incubators specifically tailored for early-career professionals. The forum aims to cultivate the next generation of sustainability leaders by providing them with the knowledge, tools, and professional networks needed to drive meaningful change through digital transformation.</p>
