

<i>Session Title</i>	Artificial Intelligence for SDGs
<i>Session Description</i>	<p>Non-traditional data sources and in particular artificial Intelligence (AI) playing an increasingly vital role in tracking and achieving the Sustainable Development Goals (SDGs). UNEP and UNCTAD in collaboration with partners are using AI to monitor SDG Indicator 12.6.1: Number of companies publishing sustainability reports. In this session, the focus will be on SDG indicator 12.6.1 and the use of Artificial Intelligence to monitor companies publishing sustainability reports complying with this indicator's methodology not only to monitor and promote the growth in sustainability reporting globally, but also</p> <p>to monitor and promote high quality reporting, promote the integration of sustainability information into the annual reporting cycle of companies, and</p> <p>promote sustainability practices by companies (as mentioned in the Target under which the indicator falls).</p>
